Summary

B.Tech (Computer Science & Communication Engineering, 2026) software and security engineer, currently a Technical Consulting Engineer trainee at Cisco CX. Builds in Python and Java — from an LLM-assisted vulnerability-triage platform to a multi-currency financial reconciliation system — with a focus on correctness, safe input handling, and tests. Strong in data structures & algorithms, SQL, and agentic LLM workflows; backed by hands-on penetration testing and CEH v13, eJPTv2, PT1 and ICCA certifications.

Education

Kalinga Institute of Industrial Technology (KIIT University) — Bhubaneswar, India
B.Tech in Computer Science & Communication Engineering (CGPA: 8.56/10) — *2022 – 2026*

The Millennium School — Lucknow, India
CBSE — Class XII: 88% (2020) | Class X: 92.33% (2018) — *2018 – 2020*

Experience

Technical Consulting Engineer — Trainee, Cisco CX — Bengaluru, India | 2026 – Present

- Developed a **multi-currency vendor-invoice reconciliation & payment-monitoring system** in Python that imports supplier invoices from CSV/Excel, tracks amounts owed and paid across 9 currencies, flags overdue payments, and keeps every money total exact.
- Used exact **Decimal** arithmetic instead of floating point, rejected spreadsheet formula cells on import to block **CSV/formula injection**, detected duplicate invoices, and covered the system with a **43-test pytest** suite. *(Python, SQLite, pytest)*
- Completed apprenticeship training in **CCNA 200-301** (subnetting, VLANs, OSPF, EIGRP, ACLs, NAT — Packet Tracer labs) and in **LLMs, RAG, prompt engineering & agentic AI** on the Python/GenAI track.

Capgemini Exceller Edge Fellowship Program — Bhubaneswar, India
Hands-on training fellowship — Python stream — *Dec 2025 – Feb 2026*

- Trained across **cloud** fundamentals (AWS/Azure/GCP), **CI/CD** (Git, Jenkins, Maven), **Oracle SQL**, and **Python** for data work (NumPy, Pandas) within an Agile/SDLC delivery model.
- Capstone: an end-to-end **Power BI** analysis of a real dataset, from data cleaning to an interactive dashboard.

Cybersecurity Intern — Gurugram Police Cyber Cell (GPCSSI'25) — Gurugram, India
Cyber Security Summer Internship — *Jun 2025 – Jul 2025*

- Built **AutoVAPT**, an automated vulnerability-assessment framework in Python driving **OWASP ZAP, Nmap and SQLMap** across web, API and network targets against the OWASP Top 10.
- Validated findings, mapped them to **CVE/CVSS**, and documented them in structured remediation reports.
- Trained by Cyber Crime Gurugram in digital forensics & incident response, OSINT, digital-evidence handling, and investigation of financial fraud and social-engineering scams.

Cyber Lead — CyberVault Club, KIIT University — Bhubaneswar, India
Security Leadership & Penetration Testing Training — *2024 – 2025*

- Ran structured workshops on web-application penetration testing, OWASP methodology and manual security testing for club members.
- Organised **CyberXposed**, a penetration-testing event featuring an ACP-rank police officer and a security expert.

Projects

ExploitAIzer — LLM-assisted VAPT Platform *(Python, FastAPI, React/TypeScript, Gemini/Groq)* GitHub

- Developing a full-stack platform to cut false positives in raw scanner output: an **LLM tool-calling triage agent** (Gemini/Groq function calling) reviews findings from Nmap, Nuclei, OWASP ZAP and SQLMap, calls tools to confirm them, and must cite evidence or return `insufficient_evidence`.
- Scanners run with argument lists only (never a shell), behind a scope allowlist and single-use typed consent before any active test; a React dashboard covers scope setup, scan runs, findings review and reports.

Vendor Invoice Intelligence & Payment Monitoring System *(Python, SQLite, pytest)* GitHub

- Desktop app that imports supplier invoices from CSV/Excel, tracks amounts owed and paid across multiple currencies with date-effective exchange rates, and flags overdue payments.
- Exact decimal math for reliable totals, duplicate-invoice detection, row-level fault isolation on import, and a 43-test automated suite.

KronoX — Stock Forecasting App *(Python, Streamlit, scikit-learn, Plotly)* GitHub

- Forecasts NSE and US stock prices with a three-tier chain — **Kronos-mini** foundation model, a custom-trained gradient-boosting model, then a linear fallback — using 22 engineered features (RSI, MACD, Bollinger Bands, ATR).
- Live prices via yfinance, interactive Plotly charts, and a backtesting engine reporting Sharpe ratio, max drawdown and win rate.

Hotel Management System *(Java, OOP, Serialization)* GitHub
- Menu-driven console app for room booking, food orders and billing, built with OOP (inheritance, custom exceptions), file serialization for persistent storage, and a background thread for automatic backups.
- Handles four room categories (60 rooms) with availability checks, per-room food orders, itemised bills, and automatic reload of saved data on startup.

SubEnum — Subdomain Scanner *(Python, PyQt6)* GitHub
- GUI tool that checks wordlist subdomains over HTTP and HTTPS, scanning on a background thread so the interface stays responsive.

Purple Team Enterprise Simulation *(Kali Linux, Splunk, Wireshark, Autopsy)*
- Multi-VM enterprise lab simulating attacker and defender workflows across Linux and Windows; Nmap enumeration, manual testing, and detection with Splunk and Wireshark.

Active Directory Security Lab *(Windows Server, Mimikatz, CrackMapExec)*
- Windows Domain Controller lab used to practise and document Kerberoasting, Pass-the-Hash, Golden Ticket and lateral movement.

ACHIEVEMENTS

- Received a **full-time offer from TCS** through **HackQuest Season 10** after clearing 2 proctored CTF rounds and 2 technical interview rounds covering client-side trust exploitation, SQL injection, encoding/obfuscation and steganography.
- Competed in industry CTFs — **CloudSEK CTF** and **KPMG CTF** — solving JWT manipulation, Server-Side Template Injection (SSTI) to RCE, SQL injection and LLM prompt injection.
- **2nd Position — Microsoft Stark Expo 2023** (KIIT Chapter).

CERTIFICATIONS

- **Certified Ethical Hacker (CEH) v13** — EC-Council
- **Junior Penetration Tester (PT1)** — TryHackMe
- **eJPTv2** — Junior Penetration Tester (INE)
- **ICCA** — INE Certified Cloud Associate

TECHNICAL SKILLS

- **Languages:** Python, Java, C, SQL, Bash
- **Core CS:** Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, SDLC, Agile
- **AI/LLM:** LLM tool-calling, prompt engineering, agentic workflows, RAG, PyTorch, LangGraph, n8n
- **Web & Backend:** FastAPI, REST APIs, React, Next.js, Tailwind CSS, SQLite, Streamlit
- **Security:** OWASP Top 10, VAPT, manual security testing, threat detection, MITRE ATT&CK | Burp Suite, OWASP ZAP, Nmap, Nuclei, SQLMap, Metasploit, Wireshark, Splunk, Nessus
- **Networking (CCNA 200-301 training):** IPv4 subnetting & VLSM, VLANs & 802.1Q trunking, inter-VLAN routing, STP, OSPF, EIGRP, ACLs, NAT, DHCP
- **DevOps & Tools:** Git, GitHub, Docker, Nginx, CI/CD (Jenkins, Maven), VirtualBox, VMware, Kali Linux
- **Data:** Oracle SQL, Pandas, NumPy, Power BI
